

KIT (H697Y)

Catalog Number: 26273

Gene Symbol: C-Kit; CD117; KIT; PBT; SCFR

Description: Anti-KIT (H697Y) Mouse Monoclonal Antibody

Background: Tyrosine-protein kinase Kit, also known as proto-oncogene c-Kit or CD117 or Mast/stem cell growth factor receptor (SCFR), is a receptor tyrosine kinase protein that in humans is encoded by the KIT gene. Activating mutations in this gene are associated with gastrointestinal stromal tumors, testicular seminoma, mast cell disease, melanoma, acute myeloid leukemia, while inactivating mutations are associated with the genetic defect piebaldism.

Immunogen: A synthetic peptide from the internal region of KIT which includes the mutation of H697Y, human origin.

Tested applications: ELISA, WB

Recommended dilutions:

ELISA: 1:1000-1:5000

WB: 1:500-1:1000

Concentration: 1 mg/ml

Host: Mouse

Clonality: Monoclonal

Purity: Purified from ascites

Format: Liquid

Storage buffer:

Preservative: no

Constituents: PBS (without Mg^{2+} and Ca^{2+}), pH 7.4, 150 mM NaCl, 50% glycerol

Species Reactivity: Recognizes H697Y mutant, but not wild-type KIT of vertebrates.

Storage Conditions: Store at $-20^{\circ}C$. Avoid freeze / thaw cycles.

Western blot:

Western blot analysis of recombinant KIT (H697Y) and wildtype proteins. Purified His-tagged KIT (H697Y) protein (lane 2) and corresponding wildtype protein (lane 1) were blotted with anti-KIT (H697Y) monoclonal antibody (Cat. #26273).
